Re: Final Approval of Midwest State  
Well No. 1 Located in Unit B of  
Section 14, T-10-S, R-33-E

Gentlemen:

Recently an inspection was made of the above captioned location and it was found that the reserve pits and cellar had not been properly filled in and leveled. Further, a considerable amount of junk, casing and flow line pipe has been left scattered over the location. The dead men or tie downs had not been cut or removed. Since this was a one well location, the battery location must also be cleared and leveled in regards to the pad and burn pit with existing tanks removed.

The above work must be done before final approval can be given. The State Land Office has requested this work be done at your earliest convenience.

Very truly yours,

OIL CONSERVATION COMMISSION  
1

Leslie A. Clements  
Oil & Gas Inspector
