	Title		

1. A packer leakage test shall be commences a subtriply some bid well within seven days after actual completer of the well and annually thereafter as prescribed by the order author ing the subjective signal also be commenced on all millior coefficients with a seven days following recompletion and/or chemical is fracture treatment in superever remotia work has been done on a set. I tag shill the same or the tubing have send disturbed. Tests shall also be acted at million the munication in suspected or when requested on the Summission.

2. At least 72 hours prior to the commences in a marphacker usually tist the operator shall notify the Commission in a link of the evaluate the test is to be commenced. Offset operators of links to solutionely with elements of the solution elements and the solution elements are solutioned.

3. The packer leakage test shall commence of a both kines of the dua completion are shuthin for pressure stabilized on. Both kines shall emain shuthin until the well-head pressure is each as stabilized and for a community the hours thereafter, provided nowever, that they need to the actin shuthin more than 24 hours.

4. For Flow Test No. 1, one zone of the dust sumpletion shall be provided at the normal rate of production while the start zone remains shull'a Such test shall be continued until the flow og west dead pressure has be do stabilized and for a minimum of two boars the eaflow provided node.e.t that the flow test need not continue for more than 24 boars

INSTRUCTORS

5 . Following complet of Flow Test No. 1, the well shall again b_{1} that in accordance with the tagraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was list a st during Flow Test No. 1. Procedure for Flow Test No. 2 is to zeros seas for Flow Test No. 2 event that the previously produced to replace the main shut-in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuomeasured and recorded with recording pressure gauges, the aboura which must be checked with a deadweight tester at least twice.once of the beginning and once at the end, of each flow test.

beginning and once at the end, of each new test. 8. The results of the above-described tests shall be filed in (replical) within 15 days after completion of the test. Tests shall be filed in (replical) the appropriate District Office of the New Mexico Oli Conservations of mission on Southeast New Mexico Packer Leakage Test Form Review, a restructure with the original pressure recording gauge charts with of the deadweight pressures which were taken indicated thereon. If the orfiling the aforesaid charts, the operator may construct a pressure versus time curve for each zone of each test, indicating thereon all press changes which way be reflected by the gauge charts as well as a constweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operato the office. Form (-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
