

- B. The topsoil at the wellsite consists generally of moderately soft sandy loam.
- C. Flora and Fauna: The vegetation cover at the proposed location is moderately sparse, consisting of grass, yucca plants, miscellaneous prairie weeds and flowers, a few cactus plants, and some mesquite a short distance from the wellsite. No wildlife was observed other than lizards and jackrabbits, but it is likely that other typical semi-arid desert wildlife inhabit the area, which is used for cattle grazing.
- D. There are no ponds, lakes, or flowing streams or rivers in the vicinity of the wellsite.
- E. The nearest occupied dwelling is a ranch house, about three miles northeast of the location. The closest windmill is approximately two miles east and north of the drillsite.
- F. The wellsite is on private owned surface, with federal ownership of minerals.
- G. There is no evidence of any significant archeological, historical or cultural sites in the area of the proposed location. An archeological survey has been conducted by the Agency for Conservation Archaeology, Eastern New Mexico University, Portales, New Mexico.

12. OPERATOR'S REPRESENTATIVES.

The representatives of C & E Operators, Inc. responsible for assuring compliance with the approved surface use plan are:

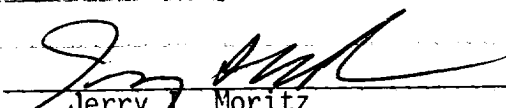

Jerry I. Moritz
C & E Operators, Inc.
P. O. Box 7764
Midland, Texas 79703

Phone 915-682-3751

13. CERTIFICATION.

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route; that I am familiar with the conditions which presently exist; that the statements made in this plan are to the best of my knowledge true and correct; and that the work associated with the operations proposed herein will be performed by C & E Operators, Inc. and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved.
