

4. Well has been perforated in the following zones:

9154-64', 9231-36', 9388-98', ~~9522-36~~, ~~9926-32~~'

9522-36 was squeezed 5-27-92
with 100 sx class H cement @ 4250#

9926-32 was squeezed 5-27-92
with 150 sx class H cement @ 4500#

The three open intervals are non-productive due to depletion.
They can be isolated by packer or probably injected into due
to low pressure.
