The elevation of the derrick floor above sea level is 4065 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is presently producing 5 BOPD & 5 BWPD. We propose to attempt to increase production from existing perforations by acidizing with 500 gal. mud acid and 5000 gal. of Halliburton HV-60 acid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
