Ohio-Federal
Well No. #1 is located 560 ft. from N line and 1980 ft. from E line of sec. 27

N. NE c. 27 8-5 34-E N. 1/4
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat Roosevelt New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill with rotary to a depth of approximately 9700 feet to test the Pennsylvanian (Bough) zones. The proposed pipe program is as follows:

400' - 13-3/8" O.D. cemented with 350 sacks.
4120' - 8-5/8" O.D. cemented with 450 sacks.
9700' - 4-1/2" O.D. cemented with 450 sacks.

It is anticipated that some coring and drill stem testing will be done in the San Andres at 4100-4200' and Pennsylvanian shows will be tested. The well will be completed by perforating the 4 1/2" casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
