(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

February 9, 19**61**

Well No. **1** is located **1980** ft. from **N** line and **1980** ft. from **E** line of sec. **14**

SE/4 **14** **8-6** **34-E** **MM P.M.**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Wilcox sand **Roosevelt** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **4287** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well has declined to 65 barrels per day and will not flow at the present. We propose to stimulate the "C" zone with 2000 gallons acid to attempt to return well to natural flow. On initial completion the "C" zone was treated with 500 gallons of acid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
