The elevation of the derrick floor above sea level is 4250 ft. (est)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to set new 8 5/8" 24# J-55 casing into redbeds at approximately 350' and cement to surface. We propose to drill to approximately 4700' and if evaluation of cores and logs indicate commercial production, to set 4 1/2" 9.5# J-55 casing to TD, using sufficient cement to bring top of cement at least 500' above top of pay zone. We propose to perforate pay zones and acidize or frack as core test indicate is necessary.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
