17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting, and proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was originally completed January 16, 1965 from perforations through 4 1/2" casing from 4089' - 4249' in the Upper and Lower San Andres formation. On December 8, 1966, in compliance with Conservation Commission Order R-3153, a packer was set on tubing at 4196' separating the two zones. Both zones are depleted and in the near future we plan to plug and abandon as follows:

20 sack cement plug through tubing from 4250' - 4030' across all perforations. A free point will be run and the 4 1/2" casing shot and 35 sack plug spotted at the top of the stub.
A 50 sack cement plug will be spotted at 200' - 300' in and out of the 8 5/8" surface casing which is set at 268'.
A 10 sack cement plug and marker will be placed at the surface and location cleaned to meet environmental requirements.
Heavy mud will be between all plugs.
