13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If Well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

MSU #44 was shut in when A.C.T. took over operations in November, 1994. After a review of the MSU #44 history, it was determined that the P1 in this well was never perforated. It is our intention to perforate and fracture treat once oil prices are in a reasonable range. Offset wells to the south are producing from the P1. We request that the BLM allow us to suspend operations until such time we get enough economic relief to perform work. A 33 page engineering assessment by M.C. Watson, P.E. (NM Lic #11031) was presented to the Roswell BLM office on October 22, 1997. The report details the potential of the Milnesand Unit. The field has tremendous potential of recovering more than the 7,000,000 BO to date of the estimated 75,000,000 BO originally in place. It will not be economical to abandon and re-enter or re-drill wells in the unit, therefore abandonment would mean permanent loss of reserves and revenue to all.
