13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If Well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

MSU #28 was cleaned out, reperforated and acid stimulated in June, 1993. The well was down when A.C.T. Operating Co. took over in November, 1994. A.C.T. had planned to shut off the P1 zone in the southern portion of the unit to eliminate excessive water production. However, the drastic drop in oil prices have precluded any work being done. We request a delay in TA procedures given this will only make the economics of reactivation more difficult. A 33 page engineering assessment by M.C. Watson, P.E. (NM Lic #11031) was presented to the Roswell BLM office on October 22, 1997. The report details the potential of the Milnesand Unit. The field has tremendous potential of recovering more than the 7,000,000 BO recovered to date of the estimated 75,000,000 BO originally in place. It will not be economical to abandon and re-enter or re-drill wells in the unit, therefore abandonment would mean permanent loss of reserves and revenue to all concerned.
