Detailed account of work done, nature and quantity of materials used, and results obtained.

This well was spudded with a Walker-Neer Cable Tool rig on April 15, 1965, witnessed by W. C. Erickson of Link Rat Hole Drilling Service Co., Box 1861, Hobbs, N. M.. We intended to set surface casing at a depth of 250' by use of cable tools; however, after experiencing numerous difficulties this plan was abandoned on April 29, 1965 at a total depth of 51'. On May 3, 1965 we moved in rotary tools and deepened the hole to 247' where we ran a string of 8 5/8" casing and cemented with 150 sacks of regular cement (2% calcium chloride) which was circulated to the surface. After waiting 18 hours we tested the cement job for a period of 45 minutes with 600# psi and found no preasure drop. We are continueing to drill with rotary tools to our projected total depth.
