Re: State DB # 8
Chaveroo Field
Roosevelt County, N. Mexico

Gentlemen:

Enclosed is proposal for plugging the State DB # 8. This procedure was discussed with Mr. Eddie Seay in the Hobbs District office.

Pursuant to discussion with Mr. Seay, we propose to pump cement down casing to plug off casing from 4424'-2470' and squeeze perforations. The cement column we place in the well will result in a hydrostatic pressure in excess of 800 psi on the producing perforations. This is more than twice the present reservoir pressure - there can be no back flow of cement up the hole. Running tubing with a cement retainer or packer to place this cement would result in at least \$2500.00 of unnecessary costs.

Please advise if you do not agree with this proposal for placing cement.
