nent to this work.)\*

Effective August 23, 1977, Read & Stevens, Inc. assumed operations from Saxon Oil Company on this well. We propose to drill and clean out cement inside of 8 5/8" casing to 4750' RKB, set a cast iron permanent bridge plug @ 4750' and spot a 35' cement plug, using a dump bailer, on top of the bridge plug. After cement is set, we propose to run a Gamma Ray-Compensated Neutron Log thru casing and perforate selected porosity intervals in the Slaughter zone of the San Andres from the overall depth of 4250' to 4500' for a completion attempt. Stimulation treatments will be dependent on results of the initial production tests. The North-Half of Section 28-7S-35E will be dedicated as the proration unit for this well and revised Form C-102 is attached.
