El Ran, Inc. proposes to plug and abandon the above referenced well because it has become uneconomical to operate. Well was produced from the San Andres Formation from perforations at 4209' to 4288'. Spot CIBP @ 4159'. We intend to cut the 4 1/2" casing off at 3300' KB. Load hole with 9 1/2" Mud Laden Fluid. Spot 100' plug at 3300'. Spot 100' plug across the Yates Formation @ 2496'. Pull up to bottom of surface pipe at 1712' KB and spot 100' plug and a 50' plug at surface with appropriate marker. Well site will be conditioned within thirty days thereafter for final approval of abandonment. We anticipate plugging to begin approximately the second week in August. We will notify you 24 hours in advance of setting plugs.
