(Range)

**N. M. P. M.**  
(Meridian)

**Wildcat**

(Field)

**Chaves**

(County or Subdivision)

**New Mexico**

(State or Territory)

The elevation of the derrick floor above sea level is \* ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

\* The elevation has not been received yet. I will forward it when received.

I plan to drill a 3500' San Andres test, using cable tools all the way.

We plan to run 10 3/4" in the top of the Anhydrite at approximately 600', cementing with 25 sacks.

If oil is encountered in commercial quantities 5 1/2" will be cemented in the San Andres dolomite at about 3300' with 100 sacks.

All casing will be run and cemented using methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
