

5. LOCATION AND TYPE OF WATER SUPPLY.

It is planned to drill the proposed well with brine water. The water will be obtained from commercial sources and will be hauled to the location by truck over the existing roads shown on the map.

6. SOURCE OF CONSTRUCTION MATERIALS

No construction materials will be needed as the road and location have already been built and are in place.

7. METHODS OF HANDLING WASTE DISPOSAL

All cement cuttings will be disposed of in the pits. Any fluids will be allowed to evaporate. Water produced during operations will be collected in storage tanks and hauled to an authorized disposal system. Oil produced will be stored in tanks until sold. Current laws and regulations pertaining to the disposal of human waste will be complied with. All trash, junk, and other waste materials will be contained in trash cages or in bins to prevent scattering and will be removed and deposited in an appropriate sanitary land fill. Burial on site will NOT be Done.

8. ANCILLARY FACILITIES:

None are planned.

9. WELLSITE LAYOUT

See the attached diagram. Shown is the existing location and dimensions of the pad and the layout of the rig. Any pit will be lined with plastic. No operations will be conducted outside or off of the existing caliche pad.

10. PLANS FOR RESTORATION

After finishing the drilling and/or completion operations, all equipment and other material will be removed. The location will be cleaned of any trash and leave the wesite in as aesthetically pleasing condtion as possible.

Unguarded pits, if any will be fenced if conatining fluid or covered if dry. If the well is non-productive, all rehabilitation and/or vegetative requirements of the BLM will be complied with and will be accomplished as expeditiously as possible. All pits will be filled level after they have evaporated and dried.
