1. **Introduction:** The study aims to investigate the impact of the COVID-19 pandemic on the mental health of healthcare workers in the United States.

2. **Methodology:** A cross-sectional survey was conducted using a validated questionnaire to assess the mental health status of healthcare workers. The survey included questions on demographic information, work-related factors, and mental health symptoms.

3. **Results:** The study found that a significant proportion of healthcare workers reported symptoms of anxiety, depression, and stress. Factors such as long working hours, exposure to COVID-19 cases, and lack of social support were associated with increased mental health issues.

4. **Conclusion:** The findings highlight the need for mental health support and interventions for healthcare workers during the COVID-19 pandemic. Further research is needed to explore the long-term effects and develop effective coping strategies.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion. The number of people aged 65 and over is expected to increase from 200 million to 400 million. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion.

1. The first step in the process of the investigation is to identify the problem or issue that needs to be addressed. This involves gathering information about the situation and determining the scope of the investigation.

2. Once the problem is identified, the next step is to develop a plan of action. This plan should outline the objectives of the investigation, the methods to be used, and the timeline for completion.

3. The third step is to collect data. This involves gathering information from various sources, including interviews, observations, and documents. The data should be organized and analyzed to identify patterns and trends.

4. The fourth step is to interpret the data. This involves drawing conclusions from the data and identifying the causes of the problem. It is important to consider the limitations of the data and the potential for bias.

5. The final step is to develop recommendations. These recommendations should be based on the findings of the investigation and should provide a clear path forward for addressing the problem. It is important to communicate these recommendations effectively to the relevant stakeholders.

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971) using a Shimadzu 10A-UV spectrophotometer. The concentration of chlorophyll was expressed in $\mu\text{g mL}^{-1}$ of the sample.

$$(\|x\|_p)^{1/p} = \left(\frac{1}{n} \sum_{j=1}^n |x_j|^p \right)^{1/p} \leq \left(\frac{1}{n} \sum_{j=1}^n \|x_j\|_p^p \right)^{1/p} = \sqrt[p]{\frac{1}{n} \sum_{j=1}^n \|x_j\|_p^p}.$$

Figure 1. The effect of the concentration of the H_2O_2 solution on the amount of the released H_2O from the H_2O_2 -loaded hydrogel. The amount of the released H_2O was measured by the weight difference of the hydrogel before and after the release. The concentration of the H_2O_2 solution was 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10 wt. %.

$$12. \quad \textcircled{A} \quad \frac{1}{x^2} = x^{-2} \quad \frac{d}{dx} x^{-2} = -2x^{-3} = -\frac{2}{x^3}$$

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets. The second step is to analyze the data. The third step is to develop a plan. The fourth step is to implement the plan. The fifth step is to evaluate the results.
