DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth 1410' Anhydrite. The hole was circulated clean with rotary and drill pipe was pulled. Ran 1410' of 8 5/8" OD 24# 8x J-55 SS casing with Texas pattern casing shoe on bottom. Mixed 15 sacks of mud with 22 barrel of oil and pumped mixture down 8 5/8" casing. Followed mud and oil with 8 5/8" OD Halli-burton cement plug. Moved out rotary and moved in cable tools to drill to total depth of well. At a later date, it is proposed to reclaim 8 5/8" casing since there is no water behind casing string. Shut off was obtained.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
