(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

July 9 December 23, 1951
Well No. 54 is located 660 ft. from N line and 660 ft. from E line of sec. 4
SE 1/4 Sec. 4 (Sec. No.) 14 South 11 East (Range) N. M. (Meridian)
Drocker Quarry (Elev.) Chaves (County or Subdivision) New Mexico Territory

The elevation of the derrick floor above sea level is 4234.8 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a well to a depth of 2850 feet, with rotary being used through the red beds to a depth of about 1200 feet, and from there to total depth will be drilled with cable tools.
13-3/8 pipe will be set in to the red beds to a depth of 130 feet and cemented with 50 sacks.
8-5/8 casing will be run through the red beds to a depth of 1200 feet and mudded. This string will be pulled after the oil string has been run and cemented.
5 1/2" oil string will be run to about 2830 feet and cemented with 100 sacks. This string will be set in the anhydrite cap that lies immediately above the Queen sand.
All casing will be set and cemented in accordance with the regulations set out by the Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
