(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

June 13, 1958

Federal Trigg  
Well No. 13-4 is located 990 ft. from XX line and 1650 ft. from E line of sec. 4  
SW/4 Sec. 4 148 318 N. M. P. M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Caprock Chaves New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4160 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to drill a 2800' Queen Sand test, using combination tools.

I propose to set approximately 100' of 8 5/8" surface casing, using 50 sacks.

I plan to run a 5 1/2" oil string. If we are not too high structurally, this pipe will be cemented in the anhydrite cap with 100 sacks and a cable tool open hole completion attempted. If we are high and 5 1/2" is run, it will be cemented through the pay.

All casing will be run and cemented, using methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
