The elevation of the derrick floor above sea level is 4114 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On July 5, 1959 well was treated with 250 gal. mud acid. Acid was reversed out of hole and 2634' of 2-3/8" EUE 3rd. 4.7# J-55 Cement lined tubing was run. A Guiberson "Shorty" packer was set at 2639' and pressure tested to 1000# for possible leakage. No leaks. Water was injected into the Queen formation at an approximate rate of 400 barrels per day on August 1, 1959.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
