Well No. 1-9 is located 1980 ft. from N line and 660 ft. from E line of sec. 9NE 1/4 Sec. 9 14 South 31 East T. 14 N. R. 31 E. M. 31 E.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)Drikey Queen Chaves New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The well will be drilled with a combination machine to a total depth of approximately 2850 feet.

Surface casing, 13-3/8", will be run at least 25 feet into the red bed section and cemented with no less than 50 sacks.

An intermediate string, 8-5/8", will be run through the red bed section to a depth of about 1290 feet, mudded, and pulled after the production string is cemented.

The production string, 5 1/2" or 7", will be run to a point about five feet above the top of the Queen sand, and cemented with approximately 100 sacks. The top of the Queen is expected at about 2030 feet, with the oil only a few feet deeper.

All casing run and cemented in the well will be under methods approved by the Geological Survey, must receive approval in writing by the Geological Survey before operations may be commenced.
