**February 19**, 19 **63**

Well No. **10-6** is located **1980** ft. from **[S]** line and **1980** ft. from **[E]** line of sec. **9**  
**14-8** **31-E** **MMPM**  
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
**Caprock Queen** **Chaves** **New Mexico**  
 (Field) (County or Subdivision) (State or Territory)

**RECEIVED**

The elevation of the derrick floor above sea level is **4160** ft.

**DETAILS OF WORK**

FEB 7 1963

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

ARTIFICIAL LIFT

Tubing and sucker rods were pulled April 13, 1961 and well was cleaned out to Total Depth of 2796'. We ran 2496' of 2-3/8" EUE 8rd. 4.7# J-55 annis. tubing (Cement lined) with Halliburton K-3 packer landed at 2498'. Packer was pressure tested for leaks. Began injection of 200 barrels of water per day on April 13, 1961 but pressure has climbed and rate is considerably lower at the present time.

Pressure will have to be increased of formation treated to maintain the 200 BPD injection rate.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
