The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is planned to drill the above well with rotary tools to approximately 1300' and then drill with cable tools to an approximate total depth of 2950'.

Casing program is planned as follows:

11-3/4" 20' Grade 1-2 200'
7" 20' Grade 1-2 2950'

The surface string will be cemented with approximately 360 sacks cement and circulated to surface. The production string will be set at approximately 2950' and cemented with 400 sacks cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
