DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to approximately 200' and complete in the green sand. 8-5/8" OD casing (see oil land) will be set and mudcapped at approximately 200'. 5" casing will be set at approximately 200' and cemented with 125 sacks. No surface water has been encountered in offset wells, and permission was previously obtained to pull the surface pipe and cement around the top of the 5". Similar procedure will be followed on this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
