completion work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and scores pertinent
to the work.

APOLLO ENERGY requests approval to continue current practice of testing wells by a
portable well tester rather than using mostly "out of service" separator meters at each
battery in the Cato San Andres Field.

Almost all wells in the Cato Field are stripper averaging 2-3 BOPD and some water.
It has been APOLLO'S experience over the last 4½ years in this field, the well tests are
more dependable & cost effective under the present system than the previous ones which I
believe were not used in years (I suspect the tests were "boiler house").
