Re: 2-7/8 tubingless gas completion,
NM0554963.
Dalport Oil #1 Holbrook-Federal
Sec. 9, 15S-30E
1980' FNL, 660' FWL
Chaves County, New Mexico

Dear Sir,

This hole was originally drilled and plugged in September, 1970: Surface casing (8-5/8" -20#) was set at 418' w/250 Sx 'C' + 2% c.c., and cement circulated to the surface. On 6-5-74 we cemented 2-7/8" -6.5# casing at 2264'. When casing was tested at 1000# for 15 minutes, pressure held. As we are in the process of running open flow potential tests, the USGS informed us that the NMOCC should approve this completion prior to producing the well.

Therefore, in accordance with Rule #107-e, we respectfully request approval by the District Supervisor, since the following conditions of Rule 107-e are fulfilled:

- 1) TD is 2264
- 2) Well is not a wildcat, as there is a Queen gas completion in the NE SE of sec. 8, 15S-30E.
- 3) No known corrosion or pressure problems
- 4) Well is not a dual completion
- 5) Tubing is 2-7/8"

Please advise if more information is desired.

Very truly yours,

Leon M. Lampert
