Re: Griffin #1 & #2

Dear Mr. Douglas:

GEFCO Gas Measurement ran 24 hour gas production tests on Griffin #1 and Griffin #2, using a 2" prover with .250 orifice plate installed and connected to a 100" hw recorder on both wells.

The two meters were replaced on line downstream of the heaters while holding 25PSI on the heaters. Therefore, the gas measured is actual gas available for sale after lease usage.

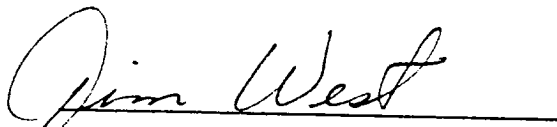

Meters set at 1300 hrs, March 9, 1982
removed at 1300 hrs, March 10, 1982

Griffin #1	Av. 7" hw = 1.39 MCFd
Griffin #2	Av. 69" hw = 14.0 MCFd

Both volumes are uncorrected for temperature or gravity.

Thank you for the opportunity to be of service. Please call on us for your future gas measurement needs.

Very sincerely yours,

Jim West
