

9. WELLSITE LAYOUT

- A. Exhibit C shows the relative location and dimensions of the well pad, reserve pits, and major rig components.
- B. The ground surface at this site is relatively level. The pad will be covered with at least six inches of compacted caliche.
- C. The reserve pits will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE.

- A. After finishing drilling and /or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk.
- B. Unguarded pits, if any, containing fluids will be fenced until they have been filled.
- C. This location being on Federal land, cleanup operations will be made in accordance with Fed. regulation. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION.

- A. Topography: The wellsite is in an area of gentle rises reaching 6-8 feet in height over a lateral distance of several hundred feet.
- B. The topsoil at the wellsite is sandy loams & loamy sand.
- C. The vegetation cover at the wellsite is of a moderate amount, and consists primarily of prairie grass and miscellaneous weeds and prairie flowers. No wildlife was observed, but it is likely that typical semi-arid desert wildlife, such as rabbits, coyotes, gophers, rodents and snakes inhabit the area. The area is used for cattle grazing.
- D. There are no stock ponds, lakes, streams or rivers within several miles of the wellsite.
- E. No occupied dwellings in the immediate vicinity.
- F. The wellsite is located on Federally owned surface as is the proposed access road.
