(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

The subject well was completed in 1983 and has been shut in since that time. The well was completed in the Morrow Sand as a liquid free (dry gas) well. Due to the low productivity of the well, we propose to connect it by flowline to the existing Isler Federal tank battery some 2000' southeast of the well site. At that point, separation of gas and any liquids will be made. The gas will be metered directly to a pipeline and liquid production, which we expect to be minimal, will be combined with production from Isler Federal wells #1, #3, and #5, which produce oil from the Wolfcamp formation. If required, we would propose that production allocation of the total liquids be based on periodic individual well tests. It is not anticipated that this well, since it tested dry gas on completion, will produce enough liquids to significantly affect the gravity of the Wolfcamp production with which it is combined. It is anticipated that work will begin within one week to make this tie-in.

18. I hereby certify that the foregoing is true and correct
