March 6, 1987

Dear Mr. Chester:

In accordance with NTL-4A, Section IV-B, Bison respectfully requests permission to vent casinghead gas from the subject well due to the following:

1. It is uneconomical to tie-in the well
2. Line pressures ranging from 70-220 psi would cause excessive back pressure on this 2100' well; this would cause a loss of oil production and early abandonment of the well.

The well currently produces approximately 4 BOPD and 5 MCF of gas valued at \$3.50 per MCF.

Please contact us if further information is needed for approval of our request.

Yours very truly,

Elizabeth Lyons
