13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Dakota Resources requests permission to leave the equalizing and circulating lines connecting the Karankawa Lease Tank (#14451) with the Wakan Tanka Lease Tank (#14552). Initial production for the Karankawa Federal # 1 was 8 bopd with the latest test showing to be 1.5 bopd. The equalizing line and circulating line were used to lower the financial burden on the well as well to provide another vessel to prevent a possible overflow from the dump valve malfunctioning and releasing a large amount of water into the Karankawa Federal stock tank. If this overflow did occur, Dakota would notify the BLM as soon as the incident was discovered. When a load of oil is ready to be sold from the Karankawa or the Wakan Tanka, the pumping unit for that well is shut down and not restarted until the load is moved. This is recorded using seals.

14. I hereby certify that the foregoing is true and correct.
