Re: Dulce "36" State Com #1 Multipoint Back-Pressure Test Exemption

Texaco Exploration and Production, Inc. respectfully requests adminis-  
from the Multipoint Back-Pressure test on the Dulce "36" State Com #1, 16-  
15S-31E, Chaves County, NM. This is a Wildcat Morrow gas well that was fracture  
127,057# of proppant in 967 bbl of fluid on Wednesday, March 21, 2001. 370 bbl of fluid have not yet  
been recovered following the fracture stimulation. The well's production rate today was 1,021 Mcfg, 5  
bbl oil, and 7 bbl of load water with a tubing pressure of 220 psig. Shutting the well in for 24 to 48 hours  
prior to a Multipoint Back-Pressure test will cause irreversible damage to the well resulting in a reduction  
in recoverable gas reserves. If you have any questions or concerns, please feel free to contact me at 915-  
688-4862.

Sincerely,

Jason Wacker  
Texaco

*CW - OK - since ran through  
surface meter for 24 hrs.*
