(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

This well was drilled to 4361' in the San Andres after the Queen Formation was squeezed off with 50 sacks (Miscellaneous Notice - June 5, 1956). In a search for waterflood water, we found less than 200 barrels per day after 20,000 gallons of acid (3805-4361'). We plan to place a 25 sack plug at the base of the liner 3805', a 25 sack plug at the top of the Queen 3062'. Cut and pull some 2000' of 5 1/2" and place a 10 sack plug in the top of the 8 5/8" surface pipe which is fully cemented at 300'.
