RE: Texas Crude Oil Company &
J. I. O'Neill, Jr.-Slack 1-13,
Unit A, Section 13, T-12-S,
R-37-E, Lea County, New Mexico.

Dear Sir:

Attached find three copies of "corrected" Form C-103 showing the 25 sack plug, that we failed to show on the original form, from 308' to 331'. As you know we placed a 100 sack plug on top of the Devonian and had 9# drilling mud from 11,719' to 4692' the bottom of the cement plug below the 8-5/8" intermediate casing.

A drillstem test was taken in the Wolfcamp of the Texas Crude Oil Company & J. I. O'Neill, Jr.-Shell Shultz Lease, located 1320' to the south of the Slack, and recovered 390' of slightly gas cut mud, 60' water with a trace of oil, 60' slightly oil and gas cut mud, flowing pressure 165# to 275# with a 30 minute shut-in pressure of 800# and hydrostatic pressure 4670#.

Inasmuch as the Wolfcamp in the Slack is lower than it is in the Shell Shultz, we believe that the 9# drilling mud is of sufficient weight to eliminate any migration of fluid from this zone.

Yours very truly,

TEXAS CRUDE OIL COMPANY

J. T. Callaway
