

LITHOLOGIC DESCRIPTION - Continued:

- 6010 - 6080 Dolomite, brown and tan, very finely crystalline, interbedded with thick beds of white crystalline anhydrite, and thin beds of gray fine sand.
- 6080 - 6110 Sand, white and gray very fine silty.
- 6110 - 6260 Dolomite, brown, tan, finely crystalline, with thick beds of white crystalline anhydrite.
- 6260 - 6590 Dolomite, light brown, tan, white, with anhydrite inclusions, interbedded with stringers of gray and tan very fine silty sand, red and gray sandy shale, gray green shale, white crystalline anhydrite, and occasional stringers of halite.
- 6590 - 7200 Dolomite, brown, tan, very finely crystalline to granular, with inclusions of blue gray pearly, and white opaque chert, and thin beds of gray and tan very fine sand.  
TOP CLEAR FORK 6590.
- 7200 - 7320 Sand, gray, pale green, very fine grained, silty.  
TOP TUBE 7200.
- 7320 - 7640 Dolomite, brown, tan, very finely crystalline, grading to dark brown carbonaceous dolomite, with occasional thin beds of gray fine sand.
- 7640 - 7750 Shale, green, flaky, interbedded with stringers of white coarse crystalline anhydrite, and tan to brown very finely crystalline dolomite.
- 7750 - 7890 Dolomite, tan to brown, very finely crystalline, with anhydrite inclusions, and massive beds of white coarse crystalline anhydrite, and thin beds of green flaky shale.
- 7890 - 7930 Shale, green and red, blocky.  
TOP ABO 7890.
- 7930 - 8190 Dolomite, brown and tan, crystalline, interbedded with thin beds of red and green shale.
- 8190 - 8290 Shale, red and green, blocky.
- 8290 - 8430 Dolomite, brown, dark brown, crystalline.
