

LITHOLOGIC DESCRIPTION - Continued:

- 8430 - 8500 Shale, red and green blocky, interbedded with light brown and tan very finely crystalline dolomite.
- 8500 - 8750 Dolomite, brown and tan, granular, with thin beds of red and green shale.
- 8750 - 8820 Shale, as above.
- 8820 - 8870 Dolomite, dark brown finely crystalline.
- 8870 - 8920 Shale, red and green blocky.
- 8920 - 9210 Dolomite, tan, brown, mottled, crystalline to medium crystalline, granular.
- 9210 - 9230 Dolomite, as above, pinpoint porosity, light stain, trace of fluorescence.
- 9230 - 9240 Dolomite, as above, barren.
- 9240 - 9270 Dolomite, as above, trace porosity, trace light stain and fluorescence.
- 9270 - 9290 Dolomite, as above, barren.
- 9290 - 9320 Limestone, tan, white, with brown and gray mottled opaque chert nodules. TOP WOLFCAMP LIMESTONE 9290.
- 9320 - 9550 Limestone, white, tan, light brown, with stringers of gray green shale, and scattered tan and brown translucent chert nodules.
- 9550 - 9600 Limestone, as above, with green shale stringers at 9555-60, and 9590-95, trace of porosity, light oil staining, and trace of fluorescence, from 9550 to 55, 9575 to 80, and 9590 to 9595.
- 9600 - 9710 Limestone, white chalky, light brown very finely crystalline, interbedded with red and green shale, trace of porosity, light stain, and trace of fluorescence 9620-9635, trace to fair porosity, light stain, trace fluorescence 9660-9700, some water stain 9680-9700.
