

LITHOLOGIC DESCRIPTION - Continued:

- 9710 - 9720 Dolomite, tan, crystalline, with white opaque chert.
- 9720 - 9795 Limestone, white, light tan, with stringers of red and green shale, trace of porosity, light stain, trace of fluorescence 9720-30, 9750-55, 9770-75, 9780-95.
- 9795 - 9850 Limestone, white, light tan, very finely crystalline interbedded with red and green shale, trace to fair porosity, no stain or fluorescence 9795-9850.
- 9850 - 9870 Limestone, white, light tan, very finely crystalline, barren.
- 9870 - 9980 Limestone, light brown, white, very finely crystalline, with thin stringers of red and green shale, trace to fair porosity 9870-9980, no stain or fluorescence.
- 9980 - 10030 Limestone, white, oolitic, medium vugular porosity, no stain or fluorescence.
- 10030 - 10050 Dolomite, tan, medium crystalline, medium vugular porosity, no stain or fluorescence.
- 10050 - 10140 Limestone, light brown, tan, white, very finely crystalline, interbedded with red and green shale, and scattered gray and tan opaque chert nodules, trace to medium vugular porosity 10050-80, no stain or fluorescence.
- 10140 - 10180 Dolomite, tan, medium to coarse crystalline, good vugular porosity, no stain or fluorescence.
- 10180 - 10190 Limestone, white, light tan, very finely crystalline, medium vugular porosity, no stain or fluorescence.
- 10190 - 10200 Limestone as above, barren.
- 10200 - 10230 Limestone as above, interbedded with red and green shale, trace of porosity, no stain or fluorescence.
- 10230 - 10270 Limestone as above, with gray and brown mottled chert stringers, barren.
- 10270 - 10300 Limestone as above, trace porosity, no stain or fluorescence.
- 10300 - 10320 Limestone as above, barren.
