

LITHOLOGIC DESCRIPTION - Continued.

10320 - 10400	Limestone, white chalky, tan, very finely crystalline, trace to medium vugular porosity, no stain or fluorescence.
10400 - 10480	Limestone as above, interbedded with red and green shale, trace to fair porosity, no stain or fluorescence.
10480 - 10520	Limestone as above, with white opaque chert nodules, barren.
10520 - 10610	Limestone, tan, white, very finely crystalline, with white opaque and tan translucent chert nodules, barren.
10610 - 10640	Limestone as above, no chert, trace porosity, no stain or fluorescence.
10640 - 10670	Limestone, white, light brown, very finely crystalline, with stringers of red and green shale, barren.
10670 - 10720	Limestone, white, light brown and chalky, medium vugular porosity, no stain or fluorescence.
10720 - 10830	Limestone, white chalky, tan, light brown, very finely crystalline, interbedded with red and green shale, and occasional nodules of white opaque and blue gray pearly chert, barren.
10830 - 10850	Limestone, white chalky, light brown, very finely crystalline, trace porosity, no stain or fluorescence.
10850 - 10960	Limestone, dark brown, tan, crystalline, interbedded with red and green shale, and occasional stringers of white opaque and blue gray pearly chert, barren.
10960 - 10980	Limestone, brown, tan, conoidal textured, trace porosity, no stain or fluorescence.
10980 - 11000	Limestone, gray, brown and black speckled, barren.
11000 - 11030	Limestone, tan, brown, oolitic.
11030 - 11050	Limestone, brown, white, very finely crystalline, grading to dark brown crystalline silicious limestone.
