

LITHOLOGIC DESCRIPTION - Continued

11530 - 11570	Limestone, white, light tan, crinoidal textured, with stringers of blue gray and tan translucent chert. <u>TOP LOWER MISSISSIPPIAN 11530.</u>
11570 - 11670	Limestone, white, light tan, very finely crystalline, with massive beds of white and tan opaque chert.
11670 - 11770	Limestone, brown, crystalline, silicious, with tan and gray silty limestone, and stringers of chert as above.
11770 - 11880	Limestone, tan finely crystalline, brown, crystalline, silicious.
11880 - 11930	Limestone, brown, crystalline, silicious.
11930 - 11950	Limestone, tan, white, finely crystalline.
11950 - 11980	Limestone as above, trace vugular porosity, trace light stain, trace fluorescence.
11980 - 12120	Limestone, brown, tan, crystalline silicious.
12120 - 12150	Limestone, tan and brown mottled, granular, with glauconitic inclusions, and stringers of brown and tan mottled opaque chert.
12150 - 12170	Limestone and chert as above, with black shale beds.
12170 - 12180	Sand, brown, calcareous, shaly.
12180 - 12210	Limestone, brown, crystalline, silicious, with interbedded black shale.
12210 - 12250	Shale, black, brown, soil. <u>TOP WOODFORD 12210.</u>
12250 - 12305	Shale as above with stringers of brown crystalline limestone.
12305 - 12330	Dolomite, white, crystalline, fair to medium vugular porosity, scattered fracturing, light stain, fair fluorescence and cut. <u>TOP DELTONIAN 12305.</u>
