## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Pull production equipment. Drill out and push Baker Model "D" Packer to the bottom of the hole. Run caliper survey through open hole section. Run Lynes Bridge plug below hookwall packer and set bridge plug at approximately 11,625', depending upon caliper survey. Shut test and if a water shut-off is obtained, pull hookwall packer and re-run production equipment and resume production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
