12. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

We propose to dig oil contaminated soil from pit down to uncontaminated soil. The contaminated soil will be spread out and bio-remediated on site. The pit will then be filled w/fresh dirt & closed following OCD guidelines. On 7/13/94, by verbal approval of Wayne Price, clean up operations commenced in an effort to determine how deep contamination is. Dirt was removed from the pit to a depth of 5'-7' where extremely hard caliche was encountered. The dirt removed was spread out on site, fenced off & a berm build around it to prevent run off. A hole was dug through caliche in the North end of pit to a depth of approximately 11' where soil samples were taken of what appeared to be uncontaminated dirt. These samples have been sent in and we are awaiting results of analysis. If analysis results are good, a bull dozer will be required to remove remaining contamination from pit. It will then be spread & bio-remediation should begin approximately 7/20/94. Ground water in this area is found at a depth of approximately 110' according to the land owner. The nearest fresh water is approximately .6 miles from the pit and the next closest is approximately 1.1 miles. (See map).

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
