Well No. 21 is locat	ed 1980 ft. f	rom N line	and 660 ft. from E line of sec. 18
SEt Sec. 18	178	32E	NMPM
(14 Sec. and Sec. No.)	(Twp.)	(Range)	(Meridian)
Maljamar	Lea		New Mexico
(Field)	(Coun	ty or Subdivision)	(State or Territory)

The elevation of the derrick floor above sea level is 3992 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to the base of the salt at 1959 ft. and as the structure was found to be low drilling was stopped at that point. 10-3/4"

casing was set at 74 ft. and 8-5/8" at 750 ft., both strings being mudded.

Pursuant to notice dated May 3, 1951, and filed and approved May 16,
the well was plugged as follows: On May 29, the hole was filled through tubing with mud, using 75 sacks of Ez-Mix mud material. A ten sack cement plug was placed through tubing from 877 to approximately 850. The casing was shot at 600 ft., and again at 480 ft. before it could be pulled. Two hundred seventy ft. of 8-5/8" pipe was left in the well extending from 480 to 750 below the surface. The 10-3/4" casing was pulled and a regulation marker was cemented in place with 10 sacks cement and the surface leveled.

I understand	that this plan of work must receive approval in writing	by the Geological Survey before operations may be commenced.
