DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights; and lengths of proposed easings; indicate modeling jobs, comenting points, and all other important proposed work)

It is our intention to drill a well with rotary bools at the above location to a total depth of approximately 4,500°. All casing points will be camented in "continues with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following easing pattern: 9 5/8" casing to be one at opproximately 400' and comented with 175 sacks, coment to be circulated. 5 1/1" easing to be set at approximately 4300' and comented with 900 sacks Trinity Inform, 4% gel.

Approval to produce this well upon completion is also requested.

I understand	that this plan of work most receive approval in writin	g by the Geological Survey before operations may be commenced.
