Artesia, New Mexico, May 29, 1946

M. E. Baish IP#25

Well No. A-8 is located 1980 ft. from N line and 660 ft. from W line of sec. 21

SW NW 21 17S 32E N M P M
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Maljamar Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4022 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to a total depth of 4103' and since the start of repressuring in the Maljamar Field has been used as an injection well to return gas to the producing formations. In order to remove any deposits from the face of the pay zones, we will ream through those zones as follows: 3930 to 3950 ft.; 3840 to 3875 ft.; 3715 to 3750 ft. The present size of the well bore is 6-1/4" and we will ream this out to approximately 8 inches.

This work will be done with Beckman, Inc. reverse circulation tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Buffalo Oil Company
