Reish A

Artesia, New Mexico, Sept. 29, 19 51

Well No. 16 is located 2980 ft. from N line and 660 ft. from E line of sec. 21  
N 1/4 Sec. 21 175 32E 107N  
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Calhoun Lee New Mexico  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4041 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well has produced water for several years and it is advisable that this water be shut off, if possible in order to minimize corrosion, prolong flowing life, and increase oil recovery. On test Sept. 6, 1951, the well flowed 27 bbls of oil plus 7 bbls. of water with a gas-oil ratio of 1410. It is practically certain that water is being produced from zone 9 at approximately 4125-4145 TD, since no water was produced prior to deepening from 4126 to 4145. We propose to spot 25 sacks of cement on bottom and wash out all cement above 4030' in an effort to plug off water. The next pay above zone 9 is above 4010'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company SUFFOLD OIL COMPANY

Address 203 CARPENTER BUILDING
