(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Baish **Lee** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **4044** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The work proposed in our Sundry Notice of Aug. 16, 1948, was never performed because of gas dissipating very rapidly and gas-oil ratio reached a normal value. However, oil production has declined to about 2 bbls. per day. We now propose to perform some type of remedial work to try to increase oil production. As a preliminary step, we propose to plug back with cement from bottom up to about 2365', 10' below oil sand. Final remedial plans will then be submitted.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
