Artesia, New Mex. March 7, 1952

M. E. Balish
Well No. A-22Y is located 2310 ft. from N line and 1650 ft. from E line of sec. 21
NW/4 SE/4 Sec. 21 17S 32E NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Balish Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

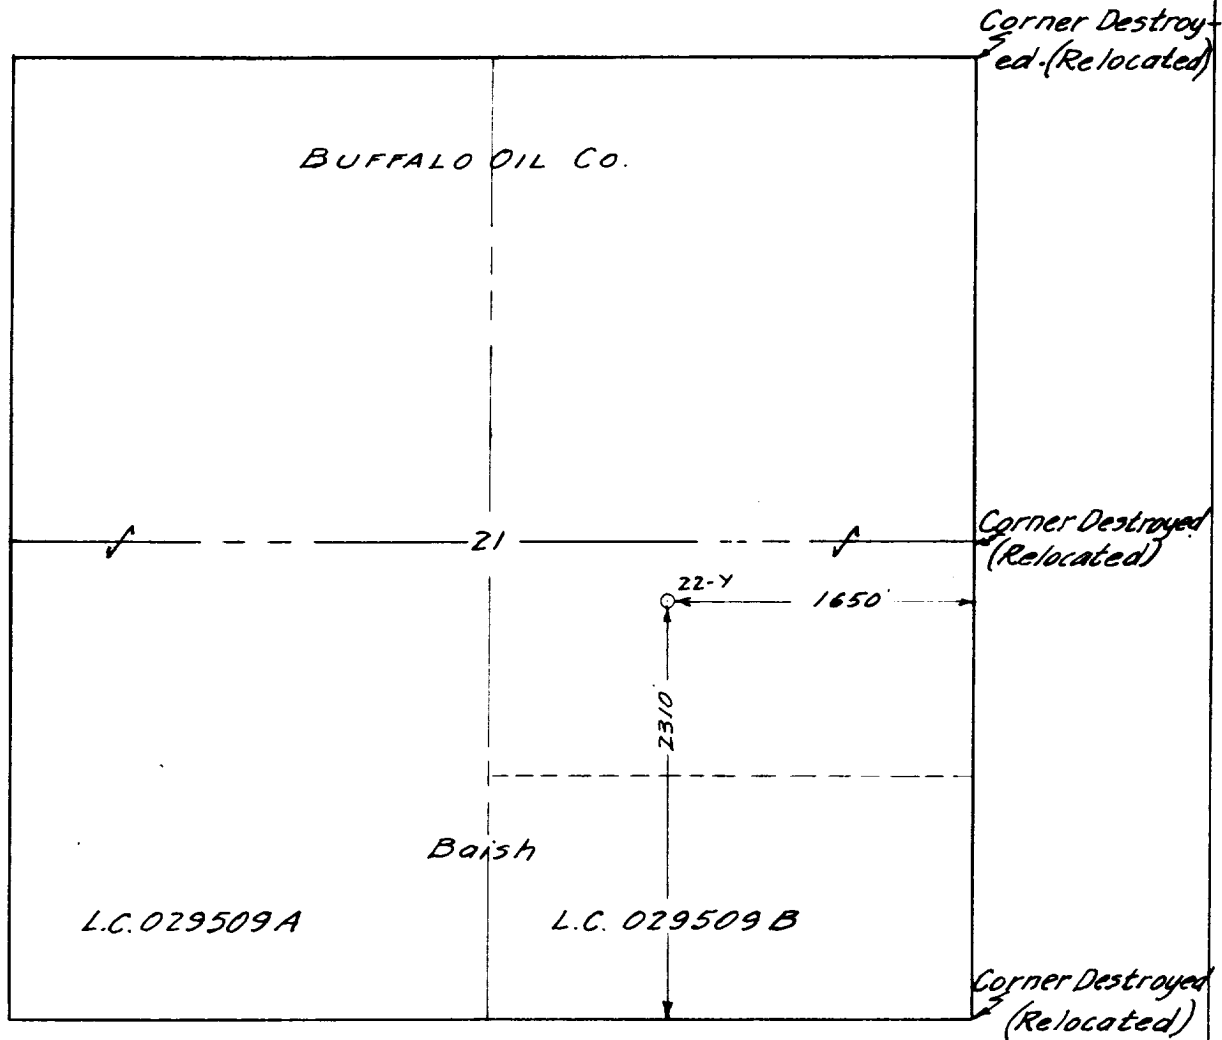

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be drilled with cable tools for a Yates sand producer to an approximate depth of 2350 ft.
A conductor string of 10-3/4" casing will be run to approximately 75 ft. and cemented to the surface. An intermediate string of 8-5/8" casing will be set in the Rustler Anhydrite at approximately 850 ft., if water be encountered above that point. This casing will not be cemented, but will be mudded and pulled when the production string is set. If no water be encountered, the 8-5/8" will not be run. The production string will be 7" 20# casing cemented at approximately 2300 ft. with 125 sacks of cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company BUFFALO OIL COMPANY
