Detailed account of work done, nature and quantity of materials used and results obtained.

This well was completed and produced within the vertical and areal limits of the Maljamar Pool. The production had decreased to such a point as to require remedial work when it was fractured several months ago. The Well responded to the treatment only temporarily and has now decreased to approximately 3 BOPD.

The Baish A-24 well, located on the same 40 acre unit and completed in the Yates Sand at the Baish Pool had declined to approximately 2 BOPD. The Baish A-24 well was deepened to the Maljamar Pool and recompleted within that producing horizons. This well is now capable of producing the allowable for this unit and the Baish A-10 has been temporarily abandoned. No further allowable will be assigned this well.
